

Innovative Dewatering Solutions

GPM provides complete dewatering solutions

From single dewatering pumps to comprehensive dewatering systems, GPM has the expertise and capability to provide cost-effective solutions. With GPM-Eliminator™ submersible pumps, the leading brands we represent, and our 35 years of experience, we create reliable, high-performance dewatering systems for any application.

Why GPM

Trusted by hundreds of cost-conscious customers across North America, GPM offers a full spectrum of capabilities. We manufacture Eliminator-branded submersible pumps, distribute leading industrial equipment brands, and provide world-class service and repair.

High-Performance Dewatering

Whether you're dewatering for mining, construction, wastewater processing or power generation, you may be using a self-priming horizontal pump, or a vertical turbine pump mounted on a barge.

Our pumps and systems are designed to be reliable and high performing. They are cost-competitive from both an installation standpoint and an operational standpoint.

GPM has the expertise to engineer and install complete custom dewatering systems to handle any application.

Superior Dewatering

Compared to a typical approach using a vertical turbine pump, or an exterior horizontal pump, dewatering with a GPM solution is more:

- **Reliable** – Extended MTBF (Mean Time Between Failures) increases service life
- **Flexible** – GPM-Eliminator™ can be completely submerged, or barge-mounted
- **Lower maintenance** – Self-priming with no auxiliary equipment required; can handle solids in the water
- **Cost-effective** – Ultra-durability means lower maintenance requirements and fewer unexpected failures, which means a lower lifetime operating cost

World's Toughest Pumps

At the heart of the innovative GPM approach to dewatering is GPM-Eliminator™, a submersible, self-priming pump. It is made to outlast and outperform with:

- 28% high chrome or CD4MCu (duplex stainless steel) wet-end construction for extended durability
- Class H winding insulation protecting the motor if the pit runs dry
- Double mechanical seal in Mobile Synturion 6 for long, reliable seal life
- Oversized pump shafts and bearings to extend the life of motors and mechanical seals
- Custom options like specialized shaft alloys

GPM-Eliminator™ pumps are backed up by our ironclad performance guarantee. One hundred percent made in America by American craftsmen.

If you need a dewatering solution...contact GPM today for a comprehensive dewatering consultation. Let's set an appointment to visit your site about your needs.
